ORIGINAL

WORLD AGRICULTURAL TRADE SHARES, 1962-85. By Dan Timms and Mathew Shane, Agriculture and Trade Analysis Division, Economic Research Service, U.S. Department of Agriculture. Statistical Bulletin No. 760.

ABSTRACT

The structure of world agricultural trade remained relatively stable during 1962-85 except for declines in the importance of trade in fiber and tobacco and vegetables, fruits, sweeteners, and beverages and increases in the importance of trade in fish and forestry products and agricultural inputs. This report presents trade shares data for commodity groups and individual commodities for both exports and imports of 129 countries and 13 country groups.

Keywords: Agricultural trade shares, total agricultural trade, aggregate measures, commodities, 3-year averages, developed market economies, developing market economies, centrally planned economies, world trade.

ACKNOWLEDGMENTS

The authors appreciate the assistance of Stacy Jones of the Data Services Center, Economic Research Service (ERS), who provided the systems analysis and programming activities and Tammy Roberts who organized the data and developed the tables. We further acknowledge the help of Nancy Kenny in preparing the charts. Lon Cesal and Thomas Vollrath, ERS, provided suggestions on structure, composition, and orientation. Lindsay Mann, Teri Davis, Thomas McDonald, and Susan Yanero, Economics Management Staff, provided editorial and design assistance.

Additional copies of this report ...

Can be purchased from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington, DC 20402. Order by title and series number. Write to the above address for price information, or call the GPO order desk at (202) 783-3238. You may also charge your purchase by telephone to your Visa, MasterCard, or GPO Deposit Account. Bulk discounts are available. Please add 25 percent extra for postage to foreign addresses.

Microfiche copies ($6.50 each) can be purchased from the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Order by title and series number. Enclose a check or money order, payable to NTIS; add $3 handling charge for each order. Call NTIS at (703) 487-4650 and charge your purchase to your Visa, MasterCard, American Express, or NTIS Deposit Account. NTIS will RUSH your order within 24 hours for an extra $10; call (800) 336-4700.

The Economic Research Service has no copies for free distribution.

World Agricultural Trade Shares, 1962-85

Dan Timms

Mathew Shane*

INTRODUCTION

This report provides a condensed, statistical picture of the role and importance of the elements within international agricultural trade and the relationship of agricultural trade to total trade.

Many sources are available which present agricultural trade statistics. However, these sources are either presented at such an aggregated basis or on such a disaggregated basis that the patterns and trends in the major components are difficult to determine. This bulletin presents a complete picture of agricultural trade and its components on a global basis while focusing on the significant elements of trade.

We start with total agricultural products, inputs, fish, and forestry as our basic unit of comparison and then divide this into 12 components. Each table in this report, whether for a country or a country group, contains the same basic agricultural trade breakdown. We also show the composition of the 12 components of agricultural trade if such a component was at least 1 percent of the total in 1985. Thus, each table has the same categories, but different subcategories. We provide the important details but omit all the insignificant details.

The Trade Yearbook Tape of the Food and Agriculture Organization (FAO) of the United Nations is the principal source for the data presented here (2). We cross-checked these data with other sources available to the U.S. Department of Agriculture to maintain consistency. The different data sources generally agree. 1/

---

*The authors are agricultural economists in the Agriculture and Trade Analysis Division, Economic Research Service, U.S. Department of Agriculture.

1/ Much discussion centers on the differences between alternative trade data sets. As a means of checking this, we compared the wheat and wheat flour component of the FAO Trade Yearbook (1) numbers against an alternative derived by Mackie, Hiemstra, and Rosen (5). The latter imposed consistency on the numbers by utilizing the condition that the global sources must equal global uses. The problem with this approach is that it uses primarily export data. Because of transportation delays and transhipments, exports will not equal imports in any one time period. However, over a 20-year period, one would expect that the quantity of imports should equal the quantity of exports within a narrow range. Our check of wheat indicated that the differences averaged less than 1 percent during 1962-83. Underscored numbers in parentheses identify literature cited in the references at the end of the text portion of this report.

AGRICULTURAL TRADE SHARES

The composition and the value of world trade reflect the interaction of fundamental factors affecting different countries' comparative advantages and the policies countries use to alter their relative trade shares by encouraging or discouraging trade. Thus, resource endowments, technology, and availability and quality of inputs affect the supply side of trade. Income, population, tastes, alternative goods and services, and marketing infrastructure affect the demand side. Domestic commodity and industrial policies and general macroeconomic policies modify these supply and demand factors and thus change the trade outcomes.

These factors explain trade outcomes at a given time. But things do not stay the same. The interactive process of governments and private agents responding to the outcomes at any given time generate changes which will then be felt throughout the world market. Thus, a country's relative resource endowments and policy mix will induce investments and technical change which over time will change the relative advantage, both comparatively and competitively, to trade in some goods and not others. By deliberate policy design or otherwise, countries may alter their trade mix by altering their fundamentals underlying trade. In some instances, such deliberate tinkering with the basics enhances a country's efficiency and growth when, for example, a country induces a growth path which complements its natural resource base. In other instances, however, the policy mix distorts the incentive structure away from the "natural" development path and induces a trade and development pattern which is seemingly not efficient from the standpoint of resource use or world trade. The objective of entering into trade is to overcome domestic resource shortages in relation to what is available elsewhere. Policies which involve subsidies that encourage the overuse of relatively scarce resources in favor of relatively plentiful ones would not seem to be desirable. Yet, the world is filled with such cases. 2/

The objective of this report is to present the outcomes of world trade rather than to discuss all the factors affecting the trade composition of nations. The process of determining trade outcomes is highly complex, and the complete understanding of it is time consuming and difficult. Examining the composition of trade patterns in some depth is the first step in the process of understanding these factors.

To simplify our discussion of world trade and to demonstrate the usefulness of the information we have assembled, we will briefly describe and analyze the patterns which emerged for the major categories of countries based on the 3-year averages presented in the tables for 1962-85. To present the data graphically, we reduced the table information to six items: (1) grains and oilseeds, (2) fibers and tobacco, (3) animals and dairy, (4) vegetables, fruits, sweeteners, and beverages, (5) fisheries and forestry, and (6) agricultural inputs.

We organized our aggregations into four economic groups: the world, developed market economies, developing market economies, and centrally planned economies. We divided the developing market economies into four subgroups: African, Latin American, Near Eastern, and Far Eastern countries. We also divided the developing market economies by income status: low-income economies, middle-income economies, and upper middle-income economies. We divided the centrally planned economies into two subgroups: Asian centrally planned economies and Eastern Europe and the U.S.S.R. 3/

2/ For an analysis of this issue see (5, 6, 7, 8).

3/ For the composition of the subgroups, see appendix B.

The import and export shares of the world follow very similar, but not identical, patterns (figs. 1 and 2). The trends differ somewhat because exports are valued at f.o.b. (free on board) prices while imports are valued at c.i.f. (cost, insurance, and freight) prices. When relative transportation costs differed across categories, we introduced differences in costs.

The major feature of the world pattern during 1962–85 was that grain and oilseed trade and animals and dairy trade remained fairly constant at just over 20 percent and just over 10 percent of the total. The major changes in the overall composition of trade were declines in fibers and tobacco, and vegetables, fruits, sweeteners, and beverages, and the increase in the relative importance of fish and forestry products and input trade.

The relative stability of the world pattern is surprising, considering the substantial changes in some of the subgroups of countries and in some individual countries. The world as a whole presents a more constant pattern than any of its components. The composition of trade changed during the study period, but most of the changes were substitutions between countries rather than changes in overall composition.

The import patterns for the developed market economies indicate the importance of these countries in the total (figs. 3 and 4). The patterns were very similar to those of the world. Grain and oilseeds were similarly stable but at a lower level than the world. The importance of fishery and forestry trade increased in significance over time. On the export side, grains and oilseeds were about as important as for the world, but fishery and forestry products and animal and dairy were more important, while vegetables, fruits, sweeteners, and beverages were less important.

The patterns for the developing market economies were substantially different from those of the developed market economies, and the import and export patterns varied considerably from each other (figs. 5 and 6). Grains and oilseeds were the most important component of imports, almost 40 percent of the total. Except for fibers and tobacco, a small and declining share, the remainder of imports was divided fairly evenly among the other four categories. Inputs were more than 10 percent of imports, about double the share for the developed market economies. Vegetables, fruits, sweeteners, and beverages were the dominant exports, more than 40 percent of the total. Grains and oilseeds were the next most important export, averaging about 20 percent of total exports and remaining fairly stable over the period. Fish and forestry exports became increasingly important, surpassing grains and oilseeds by the end of the study period. Fish and forestry exports are essentially extractive in nature and could be affected by increasing environmental concerns of long-term resource depletion in the developing countries.

The import patterns of the regional developing market economies groups, Africa (figs. 7 and 8), Latin America (figs. 9 and 10), the Near East (figs. 11 and 12), and the Far East (figs. 13 and 14), provide insight into the distribution of the changes for the entire developing market economies group. The grains and oilseeds were the most important import group for all of the regional groups. For Africa and Latin America, they became increasingly important; for the Near East, they remained fairly constant, and for the Far East, they declined in importance. Vegetables, fruits, sweeteners, and beverages dominated exports. For the Near East, fibers and tobacco were the dominant export, although they declined over time; vegetables, fruits, sweeteners, and beverages and inputs substituted for the loss in fiber trade. In the Far East, fish and forestry and vegetables, fruits, sweeteners, and beverages dominated export trade.

Grains and oilseeds dominated imports of all income groups of the developing market economies. These commodities became less important for the low-income countries (fig. 15), remained consistently important for the middle-income countries (fig. 16), and became increasingly important to the upper middle-income countries (fig. 17). The low-income countries substituted inputs for grain and oilseed imports, consistent with their overall drive towards food self-sufficiency. Vegetables, fruits, sweeteners, and beverages dominated exports for all income groups (figs. 18–20), although grain and oilseed exports expanded rapidly and accounted for a larger share of exports of the upper middle-income countries at the end of the study period than did the vegetables, fruits, sweeteners, and beverages group. This change probably reflected the rapid increases in Malaysian palm oil exports and the success of Brazil and Argentina in exporting soybean meal.

The composition of trade for the centrally planned economies was different from both the developing and developed market economies (figs. 21 and 22). Grain and oilseed imports were the largest single component, accounting for more than 30 percent of imports. The increases in vegetables, fruits, sweeteners, and beverages and inputs were offset by decreased fiber and tobacco imports. Declining grain and oilseed exports and vegetable, fruit, sweeteners, and beverage exports were offset by increased fish and forestry exports and input exports. These last two product groups are largely extractive and pose problems of long-term environmental and resource depletion.

The Asian and East European subgroups of the centrally planned economies have quite distinct patterns (figs. 23–26). For the Asian centrally planned economies, grains and oilseeds were the dominant imports, although the share declined by 50 percent during 1963–85. On the other hand, the share of grain and oilseed imports for Eastern Europe and the U.S.S.R. was historically smaller, but rose over time. The Asian economies substituted fish and forestry and inputs for the loss of grain and oilseed imports and had the highest level of input imports of any of the country groups by 1985. Expanded fish and forestry exports for Asia and input exports and fish and forestry exports for Eastern Europe and the U.S.S.R. dominated the patterns. In both cases, grain and oilseed exports generally trended downward in relation to other exports.

DERIVATION AND USE OF TABLES

The statistics in the country group tables and the individual country tables are generated by identical statistical procedures and are based on the same data base. A major function of these tables is to show the relative importance of trade in selected commodities and aggregate measures as value shares (percentages) of the grand total of agricultural products, inputs, fish, and forestry products (APIFF). A second major function is to show the long-term trend in the importance of given commodities as shares of the APIFF total.

As shown in table 27, for example, Afghanistan's 1985 total import merchandise trade was more than eight times its APIFF total. In the commodity area, margarine constituted a little more than 25 percent of APIFF imports. The reader who desires to know the absolute levels can multiply the percentage figure for the commodity times the APIFF total.

In the second data column, we show a simple arithmetic average of the 24-year period. This average can be used as a benchmark or "reference value" for evaluating and comparing the statistics shown in the remaining columns. Three-year averages are used in these columns to present the essential statistics of the 1962-85 period on one page.

The vertical components of each table begin with the APIFF values in current value terms. Respective aggregate measures and commodity and commodity percentages of APIFF values are shown in sequence. Compositions of individual aggregate measures and commodities are given in appendix A.

The "Commodities" area has major headings such as "Grains" and "Oil crops and products." Under these major headings are subheads such as "Wheat and meslin," "Margarine," and "Palm oil." Space restrictions prevent a complete listing of all commodities traded. If the value of a given commodity is not at least 1 percent of the 1985 APIFF value, it is not shown in the respective table.

Units of Measure and Valuation

Exports are generally reported at "free on board" (f.o.b.) values and imports at "cost, insurance, and freight" (c.i.f.) values. Both imports and exports are f.o.b., however, for Australia, Bulgaria, Canada, Czechoslovakia, Dominican Republic, Panama, Papua New Guinea, Paraguay, Philippines, Poland, South Africa, United States, U.S.S.R., Venezuela, Zambia, and Zimbabwe.

Export tables of oil exporters have total merchandise trade data that are so large relative to their agricultural trade that they are not carried to two places to the right of the decimal point.

Trade Aggregate Groupings

"Total agricultural products, inputs, fish and forestry" is the grand aggregate of the agricultural trade covered in each table. "Total merchandise trade" is the grand total of agricultural and nonagricultural trade.

"Basic agricultural products" is the total of trade in the traditional component of agricultural trade. This total does not include fishery and forestry products and farm input items.

"Food excluding fish and fishery products" is a new aggregate measure used for the first time in FAO's 1985 Trade Yearbook. This measure is a technical differentiation from the Standard Industrial Trade Classification Code for "food and live animals." This new measure also excludes coffee and tea and feedstuffs for animals while including edible oilseeds and vegetable oils.

"Fish and fishery products" and "Forestry products" are valued and used as grand aggregates. Detailed breakdowns of the products under each of these aggregates can be found in FAO's Yearbook of Fishery Statistics and Yearbook of Forestry Products.

Symbols Used in Tables

EX = Only part of the trade for the item(s) is included in the total shown.

NES = Not elsewhere specified or included.

-- = Value of trade reported for item was less than 0.005 percent of "Total agricultural products, inputs, fish, and forestry."

0 = No trade was reported or trade value was less than $500.00.

APPENDIX A: MAJOR CATEGORIES AND SELECTED SUBELEMENTS IN INTERNATIONAL AGRICULTURAL TRADE

In many situations, products and services that comprise agricultural trade are difficult to specifically define. For example, some countries list highly processed products such as manufactured fertilizers as part of their agricultural trade. A similar problem arises with canned fruits and vegetables. The basic product is "agricultural." However, after it is canned and boxed for shipment, does the product shift to "manufactured" status? The agricultural trade statistics in this bulletin are based on the Food and Agriculture Organization's categorization scheme for agricultural trade.

Grains: Wheat and meslin, wheat flour, rice, barley, maize, rye, oats, cereals NES, malt, and bran and milling products.

Oil crops and products: Soybeans, soybean cake, soybean oil, groundnuts, groundnut cake, groundnut oil, palm nuts and kernels, palmkernel cake, palm oil, palmkernel oil, cottonseed, cottonseed cake, cottonseed oil, linseed, linseed cake, linseed oil, sunflowerseed, sunflowerseed cake, sunflowerseed oil, rape and mustard seed, rapeseed cake, rape and colza oils, copra, copra cake, sesame seed, castor beans, olive oil, coconut oil, castor oil, maize oil, oilseed cake, and margarine.

Fibers: Cotton lint, silks, wool (greasy), wool (degreased), jute and bast, flax fiber EX, and sisal and other agaves.

Tobacco, unprocessed (in leaf form)

Vegetables and fruits: Potatoes, pulses, tomatoes, onions EX, oranges and tangerines, lemons and limes, other citrus, bananas EX, apples, grapes, raisins, coconuts in shell, shelled coconuts, pears EX, peaches EX, pineapples EX, canned pineapples, dates, and hops.

Sweeteners, condiments, and other related products: Raw sugar, refined sugar, natural honey, peppers EX, pimentos EX, vanilla, cocoa paste EX, cocoa butter EX, and chocolate.

Beverages: Coffee, tea, cocoa beans, cocoa powder, wines, and beer.

Live animals and meat products: Bovine cattle, sheep and goats, pigs, chilled fresh meat, dried salted meat, canned meats NES, animal oils and fats, lard, and meat meal.

Dairy and poultry products: Milk and cream, whey, dry milk and cream, evaporated milk and cream, butter, cheese and curd, eggs in shell, liquid eggs, and dried eggs.

Forestry products (a grand total including natural rubber and gums).

Fish and fish products (a grand total).

Farm inputs: Tractors, manufactured fertilizer, crude fertilizers, and pesticides. 1/

1/ Does not include harvesters and planting and tilling equipment.
